```
AAD05300-AAD05379 represent CDNAs corresponding to 28 human secreted protein genes, and AAE01436-AAE01513 represent the proteins they encode. CC AAE01544 represent human secreted protein fragments or variants. CC The genes and their secreted proteins are useful for preventing. CC treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the mutations in the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the mutations in the new genes. Specific uses are described for each of the mitations in the new genes. Specific uses are described for each of the colliferative disorders. For the diagnosis or treatment of an include developing products for the diagnosis or treatment of conflictative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoletic disorders, diseases of the immune system, allergies, neurological disorders (e.g., Alzheimer's disease, allergies, neurological disorders (e.g., Alzheimer's disease, skin disorders, gastrointestinal disorders, pregnancy related disorders, and infections. The proteins can also be used to aid wound clasorders, and infections. The proteins can also be used to aid wound clasorders, and infections. The proteins can also be used to aid wound clasorders, and infections the proteins can also be used to aid wound clasorders, and infections to regenerate tissues, to identify their computation or parametry tissues, to regenerate tissues, to identify their comparation and an encouration and encouration or promormation or propertine of primary tissues, to regenerate tissues, to identify their comparation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunoassay or enzyme linked immunoassay or enzyme linked secreted protein-encoding cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                        nucleic acid molecules encoding 28 human secreted proteins for sposing, preventing, treating or ameliorating medical conditions and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ggcggatttgacctgtacttcattttggacaaatcaggaagtgtgctgcaccactggaat 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  140 atggccacggcggagcggagagcctcggcatcggcttccagtggctctctttggccact 199

ADD05300-AADD05379 represent cDNAs corresponding to 28 human secreted protein genes, and AAE01436-AAE01513 represent the proteins they encode. AAE01544-AAE01544 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing, the genes and their secreted proteins are useful for preventing. The genes and their secreted proteins e.g., by protein or gene therapy pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the second of the inspecience of mutations in the new genes. Specific uses are described for each of the second of the inspecience of mutations in the new genes. Specific uses are described for each of the second include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental about an information allergies, hematopoietic disorders, diseases of the immune system, abnormalities, hematopoietic disorders, schizophrenia, asthma, allergies, neurological disorders, schizophrenia, asthma, allergies, neurological disorders, schizophrenia, asthma, cardiovascular disorders, angiogenic disorders, kidney disorders, endocrine disorders, and infections. The proteins can also be used to aid wound

healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g. radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein-encoding cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              645
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              360

chronic myelogenous leukemia, cancer, liver disease, Hodgkin's disease, osteoarthritis, Lyme's disease, cachaxia and autoimmune diseases e.g. mysathemia gravis, autoimmune diabetes and systemic lupus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial TANGO 128, 137, 224, 239 sequences are useful in forensic biology, for diagnostic assays, prognostic assays, pharmacogenomics and for monitoring clinical trials. TANGO polypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a disorder associated with aberrant TANGO expression. A wide range

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, mannosouppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, unitingation of the activities such as: Immune system suppression, utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and

The invention relates to human nucleic acids (AAI57798-AAI61369) and
the encoded polypeptides (AAM38642-AAM42213) with nootropic,
the encoded polypeptides (AAM38642-AAM42213) with nootropic,
immunosuppressant and cytostatic activity. The polypucleotides are useful
c in gene therapy. A composition containing a polypeptide or polynucleotide
c in gene therapy. A composition containing a polypeptide or polynucleotide
c the invention may be used to treat diseases of the peripheral nervous
c system, such as peripheral nervous injuries, peripheral nervous
c calised neuropathies and central nervous system diseases, such as
localised neuropathies and central nervous system diseases, such as
localised neuropathies and Shy-Drager Syndrome. Other uses include the
lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
lateral sclerosis, enclytites such as: Immune system suppression,
c attinisation of the activity, cancer diagnosis and therapy, drug screening,
assays for receptor activity, arthritis and inflammation, leukaemias and
c N. S. disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence data for this patent did not form part of the printed

                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes primer sets for synthesising 5602
full-length cDNAs defined in the specification. Where a primer set
comprises: (a) an Oilgo-dr primer and an Oilgonucleotide comprises one of
to the Complementary Strand of a polynucleotide which comprises one of
the 5602 nucleotide sequences defined in the specification, where the
collygonucleotide comprises at least 15 nucleotides; or (b) a combination
of an oilgonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide complementary to a
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide complementary to a
coligonucleotide comprises at least 15 nucleotides and the combination of
the 5'-end sequence, where the
coligonucleotide comprises at useful for synthesising polynucleotides,
the 5'-end sequence is selected from those defined in
the specification. The primers are useful for synthesising polynucleotides,
condacterion and/or diagnosis of the abnormality of the proteins encoded by
the full-length cDNAS. The primers allow obtaining of the full-length
condacterion and/or diagnosis of the abnormality of the full-length
condacterion and/or are present human cDNA sequences; AAB0316 to AAH13628 and
AAH13633 to AAH13632 to AAH13632 to AAH13632
condacterion and/or diagnosis of added sequences; and AAH13639 to AAH13630
condacterion and condacterion and sequences; and AAH13630 to AAH13630
condacterion and condacterion and sequences; and AAH13630 to AAH13630

                                                                                                    Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus thost diseases, rheumatoid arthritis, positissis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's disease, osteoarthritis, Lyme's disease, cachesta and autoimmune disease, og. myasthemia gravis, autoimmune diabetes and systemic lupus erythematosus. The nucleic acids are also useful for producing transpenic animals and the TANGO polypeptides themselves. Partial TANGO-128, 140, 197, 212, 213, 224, 239 sequences are useful in forensic biology; for diagnostic assays, prognostic assays, prognostic assays, propostic assays, propostice are seculable for monitoring clinical trials. TANGO polypeptides are sustiable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a disorder associated with aberrant TANGO expression. A wide range
Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         coetgetgatectgtteetgeteetageeetggeteteetetggtggtetggeeeetet 1036

The invention relates to human breast cancer expressed polynucleotides (AAL07544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human breast cancer expressed polynucleotides (AALO7544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast calls. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         532

(AALO7544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to human breast cancer expressed polynucleotides

The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. THE TANGO POLYpeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand

AAA75157-59 encode human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO 26 cellular differentiation and/or modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular adhesion in proliferation, modulate cellular interactions, modulate the proliferation, differentiation, and/or function of cells chart appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, cand hematopoietic associated diseases and disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral centerial and viral meningitis, Alzheimer's Disease, inflammations, Dactorial and viral meningitis, Alzheimer's Disease, cerebral concers, hydrocephalus and encephalitis, and treat hepatic disorders in the present sequence does not appear in the specification; it was concerned and the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of the conceptual of

                                                                                                                                                                                                                                                                                                                                                                                                                                   describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    426
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         546

```
AAA75160-62 encode murine TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO 262 ellupar beneficially and the tellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Wilebrand factor-associated disorder, requiate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferation, and/or function of cells matrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation differentiation, and/or function of bone and cartilage east of sociated and cartilage ells and to treat bone and/or treat diseases or disorder: Any may also be used to treat diseases and sociated and cartilage associated and cartilage associated and cartilage ells and to treat bone and/or treat diseases or disorder: Any may also be used to treat diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders. note: the present sequence does not appear in the specification; it was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ccagoctgctacggcggatttgacctgtacttcattttggacaaatcaggaagtgtgctg 168

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Search completed: August 9, 2002, 02:02:44 Job time: 10781 sec

Pending Nucleic Acid and/or Pending Amino Acid database searches now generate two sets o results. These databases were split into to two parts to reduce the time needed to update the databases daily. The split freed up more machine time for processing searches.

Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions, .rnpm and .rnpn

Searches run against the Amino Acid Pending database produce two sets of results, with the extensions, .rapm and .rapn

The Pending database search results should not be left in the case because they contain data that is confidential.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
